

PITTSFORD - BRANDON

US Route 7

Reconstruction Project

DATE: October 15, 2026

As part of the ongoing US Route 7 upgrade project, the Vermont Agency of Transportation in conjunction with Engineers Construction Inc. (ECI) is set to begin the full-depth reconstruction on US Route 7 beginning in Brandon just south of the Otter Valley School entrance proceeding 1.66 miles to the Pittsford-Brandon town line (Chapel Hill Road). The completion date for this work is October 2028.

This project will consist of a complete rehabilitation of the existing concrete roadway subbase, widening of the existing roadway, a new traveling surface, drainage improvements, and relocation of aerial utilities. This project also includes the replacement of a box culvert (Bridge 110), and extension of two additional box culverts (Bridges 111 & 112).

ECl is anticipated to begin work on Monday, October 19, 2026. This work will be performed during the daytime hours of approximately 7:00 a.m. to 7:00 p.m. During the construction period, motorists should expect traffic flow to be maintained at all times with one-way alternating traffic during construction hours with traffic control present. Motorist should expect delays.

ECl will begin work with installing the construction signage. They will then proceed with replacement of the culverts the entire length of the project. Fill will be placed on the western side of the roadway in anticipation of traffic shifts to take place next summer.

The posted speed limit will be strictly enforced as the safety of the workers along with the motorists is of the utmost importance. We ask motorists to use extreme caution while traveling through the zone. Please note the fines for speeding within the construction zone will be doubled.
